

PROGRAMMING FUNDAMENTALS ASSIGNMENT#02

1. Write a C++ code, to check whether an input number is an even number or odd number.
2. Write a C++ code to check whether an input number is multiple of 5 or not, Remember for a number to be multiple of 5, it must be completely divisible by 5, for example 25 is a multiple of 5, 30 is also a multiple of 5, but 31 is not multiple of 5.
3. Write a C++ code, which prompts you to enter your gender and age, Remember gender should be a single character like 'M' or 'F', if the gender is Female then display 'Try Again on console' otherwise check for Age, if the age is above 18, then display 'Welcome', otherwise display 'Try Again'

Important Hint: Use Nested Ternary Operator in Task 3,
